Preliminary results show longest zone of gold mineralisation – Elevated Copper in intrusion zone

GOA announces that it has received preliminary results from NEV027 drilling which it is currently analysing. The preliminary results show a zone of 1,046m of gold mineralisation with gold mineralisation to depths not previously encountered at a weighted average of 0.25g/t with no cut-off grade.

Results also show elevated copper grades from the commencement of the intrusion zone at 1,046m to 1,104m.

Full results will be released next week once the results have been received and analysed.
